DATE ACCEPTATION	18/02/2021	
DATE PRODUCTION	23/02/2021	

API Documentation

- ACC : <https://portal-acpt.api.ehealth.fgov.be/>
- PROD : <https://portal.api.ehealth.fgov.be/>

2. Updated features

2.1. API modifications

2.1.1. Get vaccination business events (**Breaking change - Only for GP software and this method is not used yet in production**)

Change the response structure to add missing pagination information for this method and add a new request parameter "page" (see swagger).

2.1.2. Update electronic contact data

This existing internal method is now deployed on the public API to allow the reservation tool to update electronic contact data.

2.2. Business rules modifications

2.2.1. Activate by ssin

New logics implemented in addition to the previous logic :

- If a vaccination code is already activated without a vaccineType, the vaccineType is always stored in the vaccination codes database when a second activation is done.
- The CIN/NIC and the general practitioner have priority for the vaccineType over other sources.

2.2.2. Update electronic contact data

A priority for the update is added :

1. Reservation Tool
2. CoBRHA
3. CIN / NIC

2.2.3. List schedulable vaccinations

People without a complete address are no longer returned in this method. The address must have a street and must have a countryCode equal to "BE" in addition to the zip code.

The limit on the number of zip codes accepted in the request has been increased from 50 to 100.

2.2.4. Get person and get notification

These methods returned all notifications even those invalidated by the reservation tool. Now, these methods return only valid notifications.

2.2.5. Activate by oldest persons first

The limit on the number of zip codes accepted in the request has been increased from 50 to 100.
