# 1. Release

<b>RELEASE NUMBER</b>	<b>1.3.0</b>	
<b>TYPE</b>		
<b>APPLICATION</b>	Vaccination	
<b>VERSION</b>		
<b>DATE ACCEPTATION</b>	16/03/2021	
<b>DATE PRODUCTION</b>	17/03/2021	

## API Documentation

- ACC : <https://portal-acpt.api.ehealth.fgov.be/>
- PROD : <https://portal.api.ehealth.fgov.be/>

# 2. Updated features

## 2.1. API modifications

### 2.1.1. Schedule

For the pre-inscription and the last minute booking, this method asks an extra field which is the “flow” field.

This field can have three values :

- NORMAL → actual flow used by the reservation tool
- PRE\_INSCRIPTION
- LAST\_MINUTE\_BOOKING

To avoid a breaking change for the reservation tool, we set “NORMAL” as default value for this field.

### 2.1.2. Get person

For new integrators (for now pharmacist software), a new scope is added for calling this method and with this scope less information are returned.

### 2.1.3. Create a business event

For the new flow “last minute booking”, this method allows to create a new business event “NO\_SHOW\_LAST\_MINUTE\_BOOKING”.

### 2.1.4. Last minute booking eligibility

This method allows to know if a person is eligible for a last minute booking.

A person is eligible if he meets all of the following conditions :

- No injection
- No schedule
- No valid notification with the flow “NORMAL”
- The “street” field is filled
- The “countryCode” equals “BE”
- Be alive
- No event “NO\_SHOW\_LAST\_MINUTE\_BOOKING”
- Not deactivated

### 2.1.5. Create notification

For the last minute booking, this method asks an extra field which is the “flow” field.

This field can have two values :

- NORMAL → actual flow used by the reservation tool
- LAST\_MINUTE\_BOOKING

To avoid a breaking change for the reservation tool, we set “NORMAL” as default value for this field.

### 2.1.6. Search notifications

So that the reservation tool sees only the notifications it has created, this method asks an extra field which is the “flow” field.

This field can have two values :

- NORMAL → actual flow used by the reservation tool
- LAST\_MINUTE\_BOOKING

To avoid a breaking change for the reservation tool, we set “NORMAL” as default value for this field.

### 2.1.7. Schedule status

This method has been developed for the last minute booking. This method allows to know if a schedule exists for a person for a given date.

### 2.1.8. Invalidate notifications

So that the reservation tool can invalidate separately notifications for the normal and the last minute booking flow, this method has an url parameter “flow”.

This url parameter can have two values :

- NORMAL → actual flow used by the reservation tool
- LAST\_MINUTE\_BOOKING

To avoid a breaking change for the reservation tool, we set “NORMAL” as default value for this url parameter.

## 2.2. Swagger improvements

### 2.2.1. Get person

A description is added for each field.
