1. Release

RELEASE NUMBER	1.7.1	
TYPE		
APPLICATION	Vaccination	
VERSION		
DATE ACCEPTATION	23/04/2021	
DATE PRODUCTION	27/04/2021	

API Documentation

- ACC : <https://portal-acpt.api.ehealth.fgov.be/>
- PROD : <https://portal.api.ehealth.fgov.be/>

2. Updated features

2.1. Business rules modifications

2.1.1. Priority change for the last minute booking system

There is a change in the priority returned in the “last minute booking eligibility” operation. The priority is calculated internally. The lowest number is the highest priority.

2.1.2. List schedulable vaccinations

“MEDIPRIO1” is added to the algorithm to return people by priority.

The priority algorithm is now :

1. Healthcare workers
2. MEDIPRIO1
3. Essential workers
4. People older than 70 years
5. 75% people from 65 to 69 years and people with a comorbidity
6. People from 18 to 69 years

2.1.3. Activation by ssin

An extra source “MEDIPRIO1” can now use this method to activate people.

The priority to update the “source” field is now the following :

1. COBRHA
2. MEDIPRIO1
3. REGION_ESSENTIAL_WORKER
4. GP
5. CIN_NIC
6. RESERVATION_TOOL

The priority to update the “vaccineType” field is now the following :

1. GP / CIN_NIC / MEDIPRIO1
2. COBRHA
3. REGION_ESSENTIAL_WORKER

2.2. API modifications

2.2.1. Last minute booking eligibility

An extra field “ineligibilityDurability” is added in the response. This allows the last minute booking software to avoid unnecessary calls to this method if the person will never be eligible again.

This field can have two values :

- TEMPORARY : The last minute booking ineligibility can change for this person.
- FINAL : The last minute booking ineligibility will never change for this person.

The “ineligibilityDurability” has the value “FINAL” when one of the following conditions is true :

- Presence of an injection
- Presence of a schedule
- Presence of a valid invitation with the flow “NORMAL”
- Presence of a valid invitation with the flow “LAST_MINUTE_BOOKING_CENTER”
- The person is deceased
- Presence of an event “NO_SHOW_LAST_MINUTE_BOOKING”

If none of the conditions are correct, this field has the value “TEMPORARY”.

Indeed the following conditions are temporary :

- The code is deactivated
- Presence of a vaccine type during activation
- Presence of a valid invitation with the flow “LAST_MINUTE_BOOKING”
- Presence of an incomplete address
 - Missing street or country code missing / different from “BE”
