DATE PRODUCTION	04/05/2021	

API Documentation

- ACC : <https://portal-acpt.api.ehealth.fgov.be/>
- PROD : <https://portal.api.ehealth.fgov.be/>

2. Updated features

2.1. API – Test result consultation: matching one-to-one

The method `.../prescriptionCodes/{code}/testResult` now supports the matching one-to-one for a CTPC code.

A result is returned when:

1. A result associated with the CTPC code is found
2. A result associated with the person and with the result date after the prescription date is found

The matching one-to-one has the priority.

It means that if there are 2 results, one associated to the CTPC code and one which isn't ; the service returns the result associated to the CTPC code regardless of the date of both results.

When several results with the same priority are found, the service returns the most recent.

3. New features

3.1. Positive self-tests

3.1.1. API : New prescribed reason

The reason positive self-test is now supported for the field `testPrescribedReason`.

The validity period is the same as the reason possible case:

- Start: day of prescription
- End: start + 14 days

3.1.2. API : `lastPositiveAutotestDate`

A new field has been added: `lastPositiveAutotestDate`

This field has to be used in combination with the new prescribed reason for positive self-test.
The date cannot be used for the other prescribed reasons.
