2. Updated features

2.1. Business rules modifications

2.1.1. New vaccination web application

As part of the vaccination, a new web application is made available to hospital doctors to declare patients with a rare / complex disease so that they can be invited to be vaccinated as a priority.

2.1.2. Solution for the quality problems with the data from the national register

We have found two quality problems in the data that we received from the national register :

1. Some special characters were replaced by this character “[“
2. Some people don't have their address which is present in the national register

To solve these quality problems, we can now reload the information of people with quality problems from the national register on demand.

A reload has been done for problematic cases.

2.1.3. List schedulable vaccinations

“HOSPITAL” is added to the algorithm to return people by priority.

The priority algorithm is now :

1. Healthcare workers
2. MEDIPRIO1
3. Essential workers
4. People older than 70 years
5. 75% people from 65 to 69 years and 25% people with a comorbidity or with HOSPITAL as source
6. People from 18 to 69 years

2.1.4. Activation by ssin

An extra source “HOSPITAL” can now use this method to activate people.
This new source can only be used by the new web application.

The priority to update the “source” field is now the following :

1. COBRHA
2. MEDIPRIO1
3. REGION_ESSENTIAL_WORKER
4. GP / HOSPITAL
5. CIN_NIC
6. RESERVATION_TOOL

The priority to update the “vaccineType” field is now the following :

1. GP / CIN_NIC / MEDIPRIO1 / HOSPITAL
2. COBRHA
3. REGION_ESSENTIAL_WORKER
